The Integral (AntiDerivative)

Definition

Theorem:

If F is an antiderivative of f then $F+C$ is the most general antiderivative

Ex:

$$f(x) = \cos(x)$$

$$F(x) = \sin(x) + c$$

Ex:

$$f(x) = x^n, n \neq -1$$

Power Chain Rule :

$$F = \frac{x^{n+1}}{n+1} + C$$

Ex:

$$n=-1 : f(x) = \frac{1}{x}$$

$$F(x) = \ln|x| + c$$
